

Table A2 The normal distribution

The table gives the proportion of the total area under the curve which lies beyond any given z value (that is, the shaded area in the diagram). It is therefore appropriate for a one-tailed (directional) test. For a two-tailed (non-directional) test, the proportions must be doubled.

The figures down the left-hand side give values of z to the first decimal place, and those across the top give the second decimal place.
